

Fitting Radlok

Radlok can be fitted in the car lot – or when the cart is made.

This crew fitted 75 carts in just 2 hours.

If the wheel has a service bolt
The fitters only need a ½ inch wrench – its that simple.

There is an installation CD if required. Radlok is fitted to the wheels the cart already has which minimises costs to buy and for maintenance.

The bolt can go either way through the wheel and Radlok. Here the bolt is a little longer than it might be so the protruding thread is left on this side (protected by the case of the Radlok). You never have to worry about the system being at different wheels or wearing out.
